DECEBAL DOBRICA

Senior Full-Stack Engineer | TypeScript, Next.js & Python Specialist | MVP Builder for Startups

+447496412887 • decebal.dobrica@gmail.com • https://www.linkedin.com/in/decebaldobrica • London

Summary

Full-stack and backend engineer with 15+ years of experience, recently focused on **Elixir and distributed data systems** for fintech and AI applications. At Tellimer, I enhanced real-time financial data pipelines using **Elixir, Kafka, and AWS**, delivering low-latency, fault-tolerant systems powering analytics and automation. Strong track record in **high-performance backend engineering**, **data infrastructure**, and **microservice orchestration**.

CORE TECHNICAL EXPERTISE

Front-End & Full-Stack
TypeScript, Javascript, React, Next.js, TailwindCSS

Backend Engineering
Python, FastAPI, Node.js, Rust, NestJS

Cloud & Infrastructure
Vercel, AWS (Lambda, RDS, S3, ECS), Pulumi, CloudFormation, Kubernetes

Data & Automation
PostgreSQL, Supabase, GraphQL, Kafka, NATS.io

Leadership
Engineering Management, System Architecture, Technical Hiring, Mentorship

DevOps & CI/CD
GitHub Actions, GCP Cloud Run, Serverless Framework, Pulumi, Terraform

KEY PROJECTS

Real-Time Market Intelligence Pipeline (Tellimer, 2022)
Built an **Elixir-based distributed pipeline** that parsed and enriched global market data streams in real time.
Leveraged **GenServer and Flow** for fault-tolerant parallel processing of financial reports.
Integrated **Kafka for backpressure handling** and **PostgreSQL for stateful aggregation** across multiple nodes.
Achieved a **99.9% uptime** SLA with intelligent retry and recovery mechanisms.

AI-Powered Trading Agent (2024)
Designed and deployed a serverless AI system using Rust and Supabase to auto-rebalance multi-exchange trading strategies.

Generative Video Engine (2023)
Built and deployed an AI-assisted video processing pipeline (FFmpeg, Pub/Sub, Cloud Run) for automated content clipping.

Experience

Ebury — London, United Kingdom
Technical Lead — 04/2025 - 09/2025

Tech Stack: TypeScript, Python, AWS, FastAPI

- Led a team of 7 engineers to improve the customer onboarding journey, reducing onboarding time by 135% through workflow simplification and automation.
- Implemented modular architecture for KYC systems, increasing test coverage by 40%.
- Collaborated closely with designers to ensure visual and UX consistency aligned with creative direction.
- Delivered end-to-end MVPs using **Next.js, NestJS, and React**, working directly with founders to define scope and ship version 1 products.

BrainRocket — Lisbon, Portugal
Senior Software Engineer — 12/2024 - 03/2025

Tech Stack: NestJS, TypeScript, Kubernetes, AWS

- Started the greenfield Jackpot project, designing a high-traffic platform with scalability and resilience from day one.
- Led the design of a high-traffic jackpot platform using distributed event-driven architecture.
- Set up scalable deployment workflows using **AWS + Vercel**, enabling rapid iteration and feedback loops.

Experience

Breakout Clips
London, United Kingdom

Technical Lead
03/2023 - 07/2024

- Implemented a cost-optimized CI/CD pipeline cutting costs by 40%.
- Built a high-performance video rendering engine on GCP Cloud Run + FFmpeg.
- Transitioned architecture to trunk-based development, reducing deployment friction by 20%.
- Set up scalable deployment workflows using **AWS + Vercel**, enabling rapid iteration and feedback loops.

Tellimer
London, United Kingdom

Software Architect
08/2019 - 03/2023

Tech Stack: Elixir, Python, FastAPI, AWS (Bedrock, Lambda, S3, SageMaker), GraphQL, TypeScript, Node.js

- Enhanced financial data ingestion pipelines, migrating core components from Python to Elixir-based microservices to improve concurrency and throughput for real-time research data.
- Implemented supervised processes in Elixir to manage long-running data enrichment tasks, improving system resilience and fault tolerance.
- Designed a distributed event-driven pipeline with Kafka and Elixir's GenStage to process millions of financial filings in real time.
- Built high-performance REST and GraphQL APIs with Elixir/Phoenix, consumed by internal analytics dashboards and client platforms.
- Deployed services with Docker and AWS ECS; integrated observability with Prometheus and Grafana for end-to-end system visibility.
- Collaborated with data and ML teams to feed structured and normalized datasets into AWS SageMaker for model training and inference.

Flyt
London, UK

Software Engineer
03/2019 - 08/2019

Funeral Zone
Exeter, United Kingdom

Software Architect
06/2015 - 03/2019

eMAG
Bucharest, Romania

Full stack programmer
11/2013 - 06/2015

eRepublik Labs Limited
Bucharest, Romania

Senior PHP Developer
08/2013 - 10/2013

H Grup IT Expert
Bucharest, Romania

Senior PHP Developer
01/2013 - 08/2013

Agile Outsourcing
Bucharest, Romania

PHP Web Developer
11/2012 - 01/2013

ContentSpeed
Bucharest, Romania

Software Developer
10/2010 - 10/2012

Eau de Web
Bucharest, Romania

Python Tester Intern
07/2010 - 10/2010

Education

Military Technical Academy
01/2007 - 12/2011

Bachelor, IT, Maths

Military Highschool, Breaza
01/2003 - 12/2007

Bachelor of Applied Science (B.A.Sc.), Mathematics and Computer Science

KEYWORDS

LLM Orchestration · TypeScript · React · Next.js · NestJS · TailwindCSS · Vercel · AWS Amplify · Supabase · REST APIs · GraphQL APIs · UX Collaboration · Component Design Systems · Serverless · Agentic Systems · Leadership · 0→1 Scaling

Certification

Sumsub KYB & Transaction Monitoring

Certification

Tech Leaders – Fractional CTO Course

Solidity Mastery Bootcamp (EatTheBlocks)

The Blockchain Bootcamp 2.0 (Dapp University)
